Scheme Specifications

The Kitemark scheme Window Energy Rating (WER) scheme is based on the approved document L1B of the Building Regulations which comes into force on 1st October 2010. This stipulates that all windows must have:

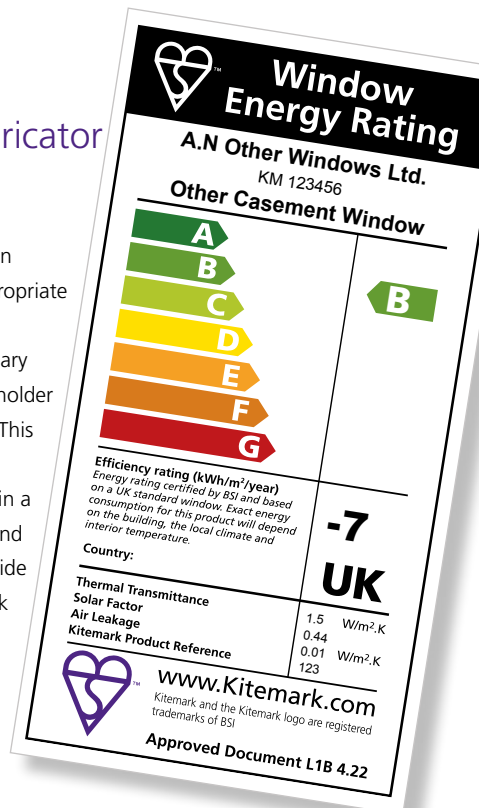

- A declared U value of 1.6 W/m²K or
- A Window Energy Rating (WER) of at least band C in England and Wales and band A or C in Scotland.

To comply with the installation requirements for replacement windows after October fabricators must provide evidence of energy efficiency.

The scheme has been tailored to meet individual fabricators needs as well as offering two options for system suppliers.

Individual Fabricator Scheme

Individual Fabricators can supply BSI with the appropriate simulation information, undergo a visit if necessary and then be the proud holder of a Kitemark licence. This is a simple process that allows Fabricators to gain a WER Kitemark quickly and efficiently. We will provide all the necessary artwork to allow companies to print their own labels.

System Supplier Schemes

There are two options to assist System Suppliers and their Fabricators achieve the Kitemark Window Energy Rating Scheme.

Option 1 – The full group scheme will offer System Suppliers their own branded Kitemark scheme label and the ability for their Fabricators to be sub-licensees of their main licence.

The System Supplier will pay an application and assessment fee and upon approval a Kitemark will be awarded. BSI will then offer a very competitive package to their Fabricators as a sub-licensee.

Benefits of option 1

- System Suppliers will have their own bespoke labelling
- System Suppliers can add additional windows during the year with no additional charge
- Reduced administration for System Suppliers as the simulation information will be applied to all Fabricators, negating the need to supply individual Fabricator simulations
- Reduced application fee for Fabricators
- Quicker certification timescales
- Companies achieving a B rating under the BSI scheme will be eligible to apply for the Energy Saving Trust Recommended scheme

Option 2 – Evaluation of system simulations

allows the System Supplier to obtain approval for all their current window simulations, but will not result in a System Supplier WER Kitemark Licence. As the necessary evaluation has already been undertaken, BSI can offer an extremely competitive package to Fabricators who apply for a Kitemark licence.

Benefits of option 2

- Reduced administration for the System Supplier as the simulation information is applied to all Fabricators, negating the need to supply individual Fabricator simulations
- Reduced administration fees for Fabricators
- Quicker certification timescales
- Companies achieving a B rating under the BSI scheme will be eligible to apply for the Energy Saving Trust Recommended scheme

Why Kitemark®?

- Provides evidence required to comply with Building Regulations
- Price banding makes an extremely competitive scheme
- BSI experienced personnel undertake the assessments
- Access to the prestigious Kitemark which has a wide consumer and specifier recognition
- The Kitemark label can be used on the product throughout the supply chain
- Listing on Kitemark.com 'Find-It' search database
- Kitemark toolkit including company-personalised, ready-to-print energy rating label
- Companies achieving a B rating under the BSI scheme will be eligible to apply for the Energy Saving Trust Recommended scheme
