

ISO 45001 Occupational Health and Safety Management System

ISO 45001 Occupational Health and Safety Management System

Prioritizing your people

Overview

Prioritizing your people with a robust strategy for health, safety and well-being is essential for becoming a profitable, innovative and resilient business. ISO 45001 is the world's first Occupational Health & Safety (OH&S) management system standard.

Its focus on risk prevention, innovation and continual improvement will benefit organizations with the foresight to achieve this global standard through improved organizational strength. It also builds upon ISO 9001 Quality Management System (QMS), following the same structure and principles.

As well as increasing employee engagement and publicly demonstrating commitment to sustainable work by providing safe and healthy workplaces, this standard focuses on key business challenges such as the supply chain and continuity planning. This allows organizations to anticipate, adapt and respond, providing both resilience and agility in a global marketplace.

Kate Field

Global Head Health, Safety and Well-being, BSI

"It's known that BSI assessors are very thorough and quite tough - so meeting their requirements is not just a 'tick in the box' exercise. That's positive, because certification by BSI really means something, both to us and to our customers."

The benefits of using ISO 45001

For organizations

Organizations with effective health and safety management systems are equipped to:

- Unlock high levels of discretionary effort from workers.
- Reduce the number of workplace injuries and illnesses.
- Enjoy higher performance levels and enhanced productivity.
- Higher product and service quality.
- Benefit from strengthened recruitment, diversity, engagement and retention.
- Reduce costs and improve compliance.
- Improve reputation among customers, suppliers, and investors.
- Create an authentic culture of trust and work engagement.
- Adapt to the future of work.

For individuals

For the individual, the benefits are equally clear. They enjoy a safe, healthy work environment, carrying out fulfilling tasks supported by effective working relationships. Effective health and safety management is an important part of an organization's well-being activities as it promotes a safe and healthy workplace.

Commitment to management standards is proven to deliver real business benefits. BSI clients who have adopted an OH&S management system tell us they benefit in the following ways:

- 79% helped comply with regulation.
- More than half say it helped protect their business.
- 64% helped manage business risk.
- More than half say it inspired trust in their business.

For leadership

ISO 45001 allows leaders of an organization to show their commitment to safe and healthy workplaces in a way that hasn't been seen before. ISO 45001 allows organizations that truly put their people first to demonstrate this by integrating broader wellness/well-being agendas into their management system. At the same time, ISO 45001 recognizes the value created by an actively engaged and empowered workforce.

Bringing health and safety and continual improvement into the heart of your business

With ongoing recruitment and retention challenges globally, the importance of health, safety and well-being as part of your organization's employee value proposition has never been more important. Proactively demonstrating a culture of care where physical and mental health are protected and harm prevented, is now an essential element of an organizations strategic purpose.

Using standards can offer a set of powerful business and marketing tools for organizations of all sizes. You can use them to fine-tune your performance and manage the risks you face while operating in more efficient and sustainable ways. They'll allow you to demonstrate the quality of what you do to your customers and help you to see how to embed best-practice into your organization. This is where ISO 45001 can be so important. BSI's globally recognized Mark of Trust will help your customers and the wider world understand how seriously and effectively OH&S is managed across the business.

ISO 45001 and its alignment to the United Nations Sustainable Development Goals (UN SDGs) sends a powerful message to shareholders and stakeholders – including employees – that organizations truly prioritize their people.

Harvard Business School

New research by the Harvard Business School¹ analyzed proprietary certification data from some of the world's largest certification companies and

injury microdata from the U.S. Bureau of Labor Statistics. It is the first study to directly examine the effects of the health and safety management standards on establishment-level health and safety performance using injury and illness data.

The study finds:

- Establishments certified tend to be safer workplaces.
- Certification reduces the total number of illness and injury by 20 percent, and the number of illness and injury cases associated with job transfers or restrictions by 24 percent.
- Evidence that it reduces the most severe injuries and illnesses - those that lead to days away from work - by a similar magnitude.

Prioritizing People Model[©]

BSI's Prioritizing People Model[©] sets out best practices for workplace well-being and the integrated elements that will deliver a culture of trust and support to a resilient organization. It encompasses the physiological and safety elements that are needed to provide decent, safe, healthy and compliant workplaces, the psychological needs of belonging and esteem to deliver an engaged, committed and productive workforce and culminates in the actualization of both people's potential and the organization's potential demonstrated through innovation. By embedding this best practice model, an organization creates a culture of trust that also enhances its resilience. To find out more about the model, [download the whitepaper](#).
