

Keeping Business Sustainable

Sustainable practice is the path to success now and for the long term.

In 1800, the world's population was 1 billion people, by 1900 it was 2 billion and today it is over 7 billion. That represents a current run rate of an extra 1 billion people every 10-15 years. With such exponential growth and increase in levels of affluence, the environment and its natural resources will be under enormous pressure.

Companies, organizations and society have a global responsibility to grow without compromising resources for future generations. The consequences of consuming finite resources at the current rate means we have no alternative but to change to a greener and more sustainable business model for society.

In 1992, the same year as the first Earth Summit in Rio, BSI brought together industry experts and innovators to create the world's first environmental standard. Since then, we've worked with industry, governments and consumers to agree best practice standards that cover the range of sustainability issues facing organizations of all sizes, focusing on 6 key areas (see right):

The benefits are measurable and will drive growth.

- Reduce your operating costs and waste to improve the bottom line
- Become the supplier of choice and win new business with independently endorsed credentials
- Achieve competitive advantage by taking a leadership position on sustainable issues
- Keep ahead of regulation and liability issues through proactive compliance
- Create a positive brand image by communicating and managing environmental, social and ethical issues
- Demonstrate your green credentials in tenders and business opportunities

A recent survey by Boston Consulting Group (BCG) reported that 60% of businesses* believe that sustainable business is key to remaining competitive and 70% plan to increase their commitment over the next year.

The BSI services outlined in this brochure address the fundamental sustainability issues facing businesses and society today and into the foreseeable future.

Environment

Understand the impact your products, services and supply chain have on the environment

Energy

Introduce actions to systematically reduce energy consumption

Greenhouse Gas Emissions (GHG)

Manage your Greenhouse Gas (GHG) Emissions as a result of activities, product or service

GRI Reporting

Validation and reporting of corporate sustainability using GRI guidelines

Social and Ethical

Demonstrate social responsibility through activities that have a positive impact on society

Biodiversity

Measure the health, maintenance and improvement of a defined ecosystem

By Royal Charter

BSI – an industry thought leader.

BSI is the world's first National Standards Body with over 100 years' experience

We bring together experts and innovators to tackle the ever-changing issues of sustainability and have led all these initiatives:

Environmental Management – BSI produced the world's first environmental standard in 1992, BS 7750 now ISO 14001, which is the world's most popular environmental standard

EU Emissions Trading Scheme – BSI is a member of the UK Working Group which advises the EU Commission of EU ETS regulatory aspects

Greenhouse Gas Emissions – BSI contributed to the ISO 14064 Working Group to develop the first GHG international standards

Greenhouse Gas Reporting Protocol – BSI contributed to the revision of the WBCSD/WRI Greenhouse Gas Corporate Accounting and Reporting Protocol

Product Carbon Footprinting – BSI developed PAS 2050, the world's first framework methodology for product carbon footprinting

Carbon Neutrality – BSI developed PAS 2060, which is the world's first carbon neutrality specification

Sustainable Events – BSI produced the world's first sustainable events standard, BS 8901, now ISO 20121

We have worked with organizations to help them gain considerable environmental and financial benefits by adopting frameworks for managing sustainability whatever their size, sector or geographical location.

BSI's expert tutors and assessors have gained a **deep understanding** across thousands of organizations globally in sustainable best practice. Their ability to transfer this knowledge into actions will enable your business to grow in a sustainable way.

As a Royal Charter company, with 65 offices worldwide, we have the global reach to help any organization, large or small make a difference not only to their business, but also to the planet.

...With **65 offices** worldwide, we have the **global reach** to help any organization, large or small make a difference...

BSI Solutions.

Our range of integrated services which can be tailored to your specific needs and help you on your sustainability journey from beginning to end:

- Standards and subscription services provide access to an enviable source of knowledge through standards and publications
- Training introduces you to standards, and explains how to implement and audit
- Independent certification proves you're compliant to your stakeholders
- Independent verification confirms your compliance reporting

- 2nd party audits against standards or organization's specific requirements provide bespoke solutions
- Business Improvement Software powered by Entropy™ helps you effectively manage your systems and processes to drive performance

Using our decades of experience and innovative development in this field, our expert teams can **work with you** to design and implement a programme which will achieve the long term benefits that come from adopting sustainable practice within your organization.

Best practice is underpinned by embedding the right disciplines within your organization, which can be achieved through management systems.

Supply Chain Compliance/Qualification.

Successfully manage your supply chain risks by knowing your real suppliers – real people, real production lines and real facilities

Today we move from domestic to regional and then global supply chains which are both more complex and spread over wide distances. As a result the definition of quality has moved to include non-physical attributes such as environmental, social, ethical and security aspirations. Reputational risk is becoming increasingly important as transparency and globalization accelerates.

Key facts

- 45% of executives lack confidence in their supply chain risk management programmes*
- 87% of executives say a strong corporate brand is just as important as a strong product brand**
- 70% of consumers avoid buying a product if they don't like the company behind the product**

Managing the supply chain is essential to protecting an organization's brand and corporate reputation.

BSI Services

Supply Chain Solutions – Supplier Verification and Risk Portfolio

An intelligence based approach from BSI can help an organization manage its supply chain risk and protect its brand reputation. It leverages standards, verification and supply chain tools to help clients identify and manage their supply chain and thus mitigate risks.

BSI Supplier Verification Audits

On-site profile validation and verification audits based on BSI or client requirements.

SCREEN Intelligence

A comprehensive supply chain intelligence resource which assists organizations in identifying and understanding their supply chain needs and threats.

Supplier Compliance Manager (SCM) Platform

A web based tool designed to facilitate and automate mandatory supplier risk assessments.

Supplier Advisory Services

Offering technical advice and information.

These services can help organizations to:

- Mitigate supply chain risks
- Protect brand and corporate reputation
- Provide reassurance to key stakeholders that suppliers are being managed effectively

Environment.

Understand the impact your products, services and supply chain have on the environment

Environmental management is designed to manage cost through sustainable practice; reduce, reuse and recycle. BSI has helped over 16,000 businesses globally to improve environmental, sustainability and operational performance.

Key facts

- The environmental impact of doing business costs the global economy £3.1 trillion per annum*
- The global waste impact by the primary production and primary processing sectors is estimated at just under US\$50 billion per annum*
- Sea level could rise between 18 to 59 cms (7-23") by the end of the century which will devastate low lying countries**
- There is an estimated 3.5 billion tonnes of rubbish floating in the Pacific Ocean.***

Management systems can help an organization fully evaluate its performance and demonstrate leadership and credibility to employees, key stakeholders and customers.

BSI Services

Environmental Management System – ISO 14001

The first and most established international standard for environmental management, originally developed by BSI in 1992. Implementing an environmental management system will help clients:

- Comply with environmental rules and regulations
- Analyze activities and establish actual and potential environmental impacts
- Measure, control and reduce waste
- Meet supply chain requirements
- Reduce operating costs by discovering and implementing more sustainable practices

Sustainable Events Management – ISO 20121

A specific standard for the events industry developed by BSI, together with the London Olympics Organizing Committee. This standard will help organizations in events management, sporting, training businesses, convention centres etc to:

- Minimize negative impacts on the environment, communities and local economy
- Cut costs through better energy and waste management
- Protect against any negative publicity
- Create a positive image for event participants and organizers
- Be in a position to demonstrate your green business model and credentials

Energy.

Introduce actions to systematically reduce energy consumption

Energy consumption is growing in importance. As the demand for energy increases it not only puts a strain on natural resources, it also impacts carbon emissions. This calls for close monitoring by organizations as the pressure on profits is not just caused by the amount of energy used, but also by rising prices. BSI can help clients cut carbon emissions as well as energy bills.

Key facts

- Total world consumption of energy has risen by 30% from 2001 to 2011* and is predicted to grow by another 25% between 2010 and 2020**
- £260bn per annum is the estimated cost of the energy that is wasted globally***
- Energy costs are forecast to grow by 25% over the next 10 years[†]
- 88% of manufacturers say industrial energy efficiency will be a critical success factor for their business profitability in the coming two decades^{††}

By focusing specifically on your energy use, organizations can target and manage their consumption in a systematic way.

BSI Services

Energy Management – ISO 50001

The latest best practice framework for energy management helps organizations better manage and maintain their energy consumption enabling them to:

- Increase energy efficiency
- Manage risks surrounding future energy supplies
- Cut energy bills with positive impact on the bottom line
- Build and support corporate reputation with good environmental credentials

Kitemark Energy Reduction Verification

BSI's Kitemark Energy Reduction Verification (ERV) scheme has been developed to offer both large and small organizations a way to verify the reduction in CO₂ emissions resulting from energy use. This independent verification provides organizations with the ability to prove their energy credentials to stakeholders, investors, specifiers, consumers and regulators.

Greenhouse Gas Emissions.

Manage your Greenhouse Gas (GHG) emissions as a result of activities, products or services

If current consumption and rising populations continue, the planet will be unable to sustain demand. There is a strong correlation between environmental footprint, consumption and Greenhouse Gas Emissions.

Key facts

- The amount of greenhouse gases in the atmosphere reached a new record high in 2011*
- UK carbon dioxide (CO₂) levels have been rising over the past century faster than at any time over the past 20,000 years**
- By 2050, carbon dioxide and other atmospheric polluting gases must be reduced by 50-85% to head off potential catastrophic changes, according to UN estimates
- By 2050, rising temperatures exacerbated by greenhouse gases could send more than a million plants and animals down the road to extinction.***

By working with BSI to implement credible and globally recognized standards, organizations can avoid 'green wash' claims, target emissions and provide credibility and reassurance when reporting to top stakeholders and customers.

BSI Services

Carbon Management – ISO 14064

An organizational level standard which enables participation in emissions trading schemes such as European Union Emissions Trading Scheme (EU ETS).

Product Carbon Footprint/Carbon Neutrality – PAS 2050/PAS 2060

These standards help to quantify, monitor, report and verify the carbon footprint or neutrality of a specific product or service.

Emissions Verification

BSI can help a business meet its mandatory reporting requirements with independent third party verification of annual emissions data reports.

All these standards can help organizations to:

- Reassure stakeholders that emissions data is accurate
- Demonstrate consistency and transparency in reporting and avoid the penalties of non-compliance
- Gain greater credibility with third party verification
- Minimise the risk of any negative publicity through inaccurate claims.

GRI Reporting.

Consultancy, Training and Verification

The Global Reporting Initiative (GRI) is a leading organization in the sustainability field. GRI promotes the use of sustainability reporting as a way for organizations to become more sustainable and contribute to sustainable development.

GRI's Sustainability Reporting Framework is a reporting system that enables all companies and organizations to measure, understand and communicate this information. GRI's mission is to make sustainability reporting standard practice; one which helps to promote and manage change towards a sustainable global economy. GRI has pioneered and developed a comprehensive [Sustainability Reporting Framework](#) that is widely used around the world. A sustainability report is a report published by a company or organization about the economic, environmental and social impacts caused by its everyday activities. A sustainability report also presents the organization's values and governance model, and demonstrates the link between its strategy and its commitment to a sustainable global economy.

GRI's mission is to make sustainability reporting standard practice for all companies and organizations. Its Framework is a reporting system that provides metrics and methods for measuring and reporting sustainability-related impacts and performance. The Framework – which includes the Reporting Guidelines, Sector Guidance and other resources – enables greater organizational transparency and accountability. This can build stakeholders' trust in organizations, and lead to many other benefits. Thousands of organizations, of all sizes and sectors, use GRI's Framework to understand and communicate their sustainability performance.

GRI is an international not-for-profit organization, with a network-based structure. Its activity involves thousands of professionals and organizations from many sectors, constituencies and regions. The Framework is developed collaboratively with their expert input: international working groups, stakeholder engagement, and due process – including Public Comment Periods – help make the Framework suitable and credible for all organizations. GRI's Secretariat is located in Amsterdam, The Netherlands, and there are GRI Focal Points – regional offices – in Australia, Brazil, China, India, South Africa, and the USA. More than 600 Organizational Stakeholders – core supporters – play a vital part in endorsing GRI's mission.

GRI in India

Indian businesses are recognizing the challenge of going global and also operating nationally with evolving regulatory requirements around environmental and social performances. There were also many players like the regulators, the business chambers, enthusiastic civil societies who were pushing the agenda of sustainability through diverse mandatory and voluntary requirements and focusing on various issues of pollution, energy, climate change safety, labour practices. Sustainability reporting was initiated ten years back by small percentage of companies steadily growing to a reasonable number in 2011.

Recognizing the contribution of financial institutions including banks towards sustainable development considering the crucial role they play in financing the economic and development activities, the [Reserve Bank of India](#) had drawn the attention of banks to their role in Corporate Social Responsibility, Sustainable Development and Non Financial Reporting in its circular dated December 2007. Also, the inclusion in the Companies Bill, 2011 to include in the Board's Report a CSR Policy and to spend 2% of average net profit of last 3 years on CSR activities had been setting a clear forward movement on the agenda. Other recent developments include the Sustainable Development and Corporate Social Responsibility Guidelines for [Central Public Sector Undertakings \(CPSEs\)](#) are a part of the each CPSEs yearly target with their commitment to implement them along with their financial and business targets.

This was followed by the launch of the [National Voluntary Guidelines](#) on Social, Environmental & Economic Responsibilities of Business on 8 July 2011 by the Ministry of Corporate Affairs, Government of India. The Guidelines provide a robust framework that may be adopted voluntarily by companies to address interests of various stakeholders, including employees, customers and investors. In most recent times the [Securities and Exchange Board of India \(SEBI\)](#) mandate from November 2011 that the 100 top listed entities must submit Business Responsibility Reports, as a part of their annual reports.

Social and Ethical.

Demonstrate responsibility through activities that have a positive impact on society

More now than ever, it is unacceptable to conduct business unethically or act irresponsibly. Organizations are accountable for their actions like never before and need to manage their reputable risk.

Key facts

- Every day, 6,300 people die as a result of occupational accidents or work-related diseases*
- 21 million people worldwide are estimated to be victims of forced labour – being in jobs which they were coerced or deceived into and which they cannot leave*
- Almost half the world – over 3 billion people – live on less than \$2.50 a day**
- An estimated 150 million children worldwide are involved in child labour***

CSR is about taking responsibility for the company's supply chain actions and ensuring a positive impact on society. Sustainability Report Assurance (SRA) can provide confidence that an organization is operating ethically.

BSI Services

Sustainability Report Assurance – SRA

BSI's SRA processes are conducted in accordance with the globally recognized Global Reporting Initiative Guidelines (GRI), and AccountAbility AA 1000 Assurance Standard.

Social Accountability – SA 8000

SA 8000 is the most widely recognized global standard for managing human rights and provides a framework for organizations to develop, maintain, and apply socially acceptable practices in the workplace.

Business Social Compliance Initiative – BSCI

BSCI is a leading business-driven initiative for companies committed to improving working conditions in the global supply chain worldwide.

These standards can help organizations:

- Protect against any negative publicity
- Prove transparency, visibility, trust and confidence in reporting through a trusted 3rd party
- Achieve best practice in ethical employment, trading and operation
- Maintain existing business and attract new customers and investors
- Improve relations with workers, trade unions, NGOs and customers

Biodiversity.

Measure the health, maintenance and improvement of a defined ecosystem

Biodiversity is the emerging area of sustainability which is gaining wider interest and focus. Biodiversity boosts ecosystem productivity where each species, no matter how small, has an important role to play. BSI is at the forefront of producing standards in this area.

Key facts

- 60% of the world's ecosystems have been degraded over the past 50 years*
- 45% of the earth's original forests have gone**
- 1/3 of reef building corals around the world are threatened with extinction.***

BSI is already developing standards in this new emerging area with the publication of BS 42020, Biodiversity in planning and development – Code of Practice expected in late 2013.

You can be sure that BSI will continue to be at the forefront of sustainability issues.
