Introduction

- Recent impacts on the Supply Chain
- Introduction to Organizational Resilience
- Importance of Supply Chain Resilience
- How to identify a critical business function
- How to identify a critical business supplier
- How to unlock the unknown risks in your supply chain
- Introduction to BSI
- Further information, support & next steps

Poll Question

What is your main objective from today's webinar..?

1. More information on Business Continuity
2. More information on Supply Chain Resilience
3. How to identify a Critical Business Function
4. How to identify a Critical Business Supplier
5. All of the above

An aerial photograph of a warehouse or distribution center. The scene shows a worker in a yellow shirt and black pants sitting at a desk with multiple computer monitors, working. To the right, a conveyor belt carries several cardboard boxes. Further right, another worker in a yellow shirt is visible near a large metal cart or pallet loaded with many cardboard boxes. The left side of the image is partially obscured by a large, semi-transparent red circle. The overall scene depicts a busy logistics or supply chain environment.

Recent Impacts on the Global Supply Chain

Impacts on the Global Supply Chain...

The collage features several news snippets and a central photograph. On the left, there are articles from 'S...', 'BBC', and 'Supreme C...'. The BBC article is titled 'Drinks target...' and dated June 9, 2020. The Supreme Court article is dated April 17, 2020. The central article is from the 'Los Angeles Times' with the headline 'Massive fire at Redlands warehouse burns Amazon trailers, briefly closes 10 Freeway'. Below the headline is a photograph of a firefighter standing amidst the twisted metal remains of a collapsed warehouse structure. To the right of the photo are several article teasers under the heading 'CORONAVIRUS >': 'Is it safe to shop and eat out yet? We assess the risk', 'These governments tamed COVID-19. They're keeping social distancing in place', 'This kind of mask can actually spread the coronavirus. Here's how to fix it', and 'How dexamethasone might lead researchers to better COVID-19 treatments'.

Ikea used forced prison labour

Agence France-Presse in Sydney

Qantas and Emirates (left) airlines were named in a report on disposable economy class earphones. Photo: Reuters.

Australian flag carrier Qantas launched an investigation into claims it purchased headphones made in a Chinese prison. The *Australian Financial Review* said other big products made at Dongguan prison in the south including British Airways and Emirates.

Two inmates recently released from the jail, including Cancian, told the newspaper they made earphones for all three airlines.

Cancian, who was serving a four-year jail sentence

It was a scandal that horrified millions of meat eaters. From frozen Bolognese to Ikea meatballs, to horse meat in their favourite dishes. Now, researchers say the problem may be food products found in the US.

A new study claims that 20 per cent of ground beef in the US is on the label.

Researchers in Chapman University's Food studies on meat mislabelling in consumer products.

Volkswagen sale brands after emissions scandal

Internal audit reveals 106 children employed in supply chain

Sales at Volkswagen fell in January as the company struggled to overcome the emissions scandal. Only top 10 European car brand to post a profit.

European car sales grew by 6.2% last month, but Volkswagen was the only manufacturer to post a profit, as consumers continued to shun its models.

Registrations for VW vehicles fell by 4% in Q4.

In the US, where the emissions scandal began more dramatically, down 10% on January 2015.

VW admitted last September to installing software to help cheat emissions tests. About 11 million vehicles around the world, with 8.5 million in Europe.

Last month, VW sales in the US fell 10% as the car maker began recalls to fix emissions systems.

In Europe, VW has been hit hard by the scandal.

Child labour uncovered in supply chain

Apple's investigation revealed some children had been recruited by a Chinese company that employed 74 children in its supply chain.

An internal audit found a flipside to the western company's innovative and competitively priced gadgets. It was being used at Apple suppliers last year and 70% of its work had a big impact.

Apple has discovered multiple cases of child labour in its supply chain.

An Introduction to Organizational Resilience

Lot's of terms being used today

- Business Continuity
- Disaster Recovery
- Crisis Management
- Organizational Resilience

What do they mean, and how can they help you today, tomorrow and moving forward...

What is the difference between Business Continuity and Disaster Recovery..?

Business Continuity is what an organization relies on to keep operations functional during a disruption or unplanned event, and immediately after.

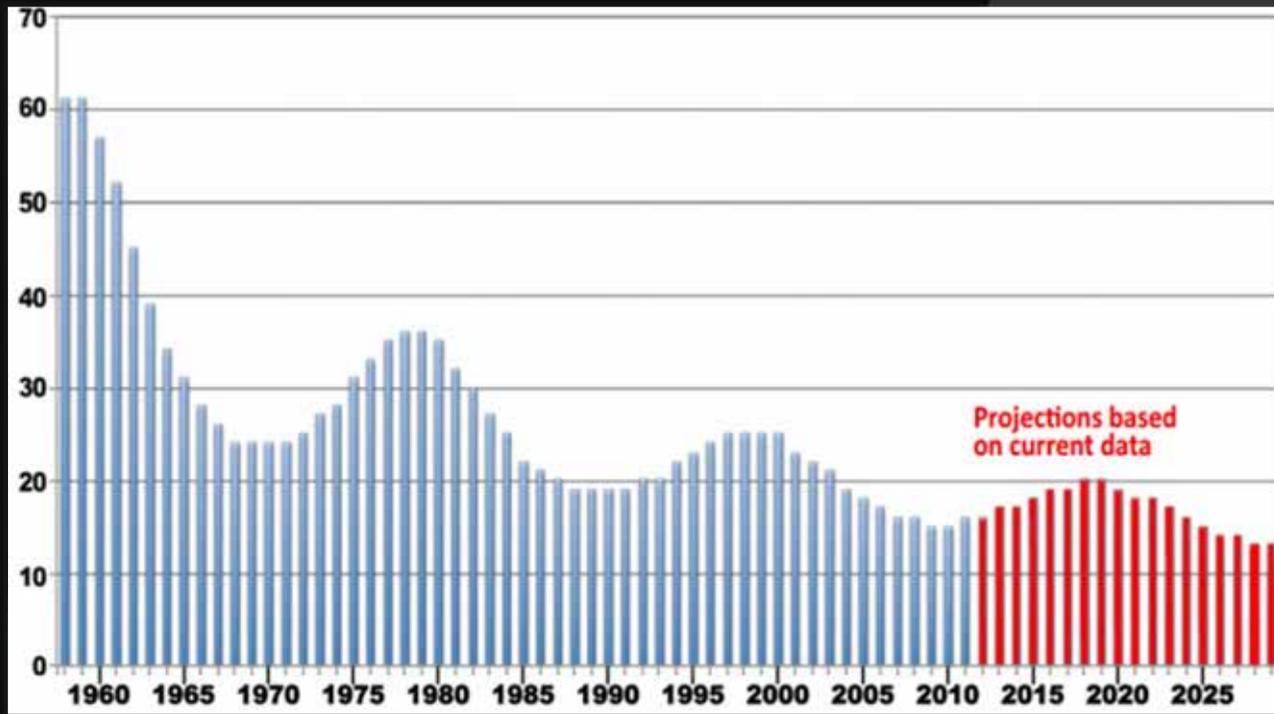

Disaster Recovery focuses on how you respond after the event has completed, review operations and how you return to normal.

What is the difference between Crisis Management and Organizational Resilience..?

Crisis Management is the process by which an organization reacts to a disruptive or unexpected event that threatens to harm them.

Organizational Resilience is the ability of an organization to anticipate, prepare for, respond and adapt to incremental change and sudden disruptions in order to survive and prosper.

The organizational lifespan ranking in the top S&P Index 500 is 200% shorter today than in the 1960's...

Organizations are not surviving as long as they used to...

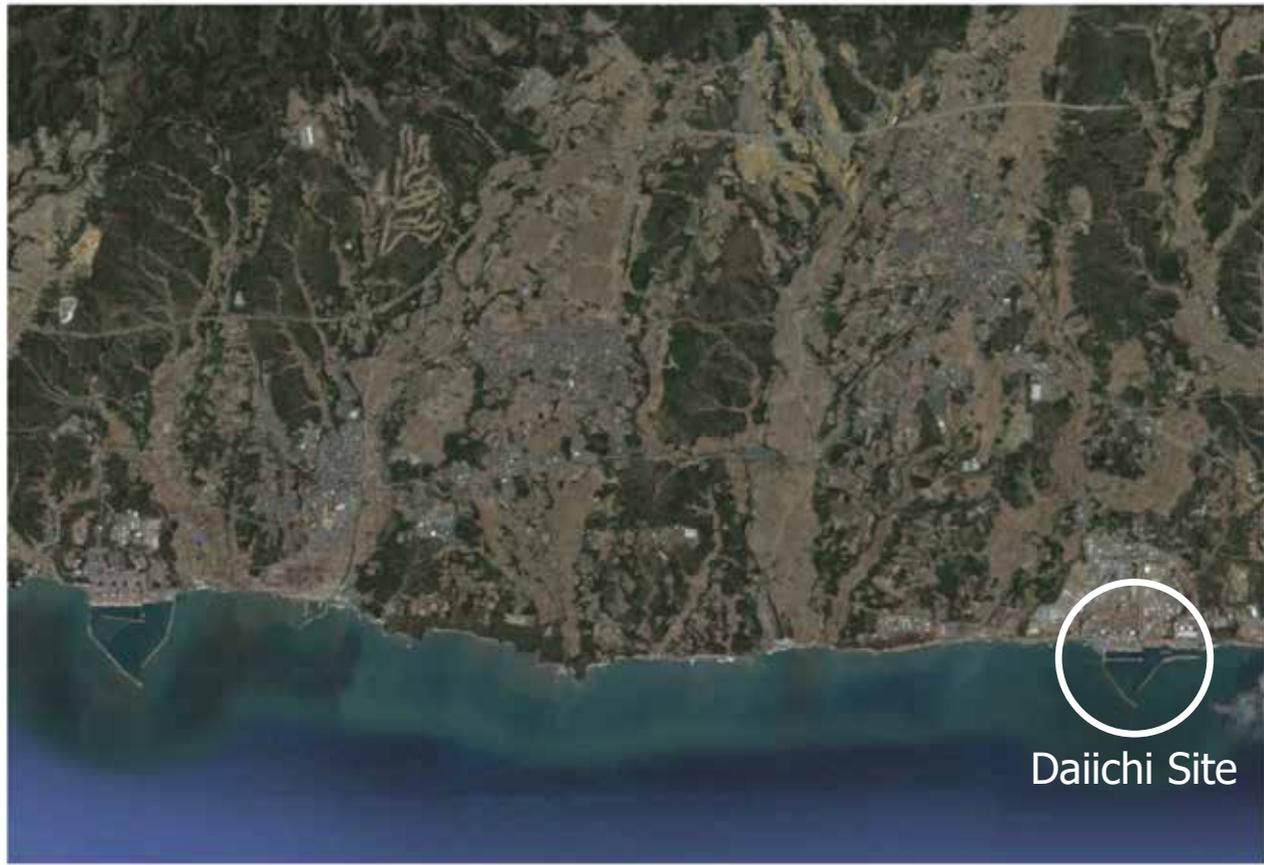

Organizational Resilience is
“the ability of an organization to
anticipate, prepare for, respond and
adapt to incremental change and
sudden disruptions in order to survive
and prosper.”

BS 65000, Guidance on Organizational Resilience

Example of Resilience...

In March 2011 an earthquake and tsunami hit the coast of Japan, which caused significant damage to the Daiichi nuclear power plant.

As a result, the Daiichi plant went critical and was declared a no-go zone by the government due to the nature of radioactive pollution in the area.

Example of Resilience...

In March 2011 an earthquake and tsunami hit the coast of Japan, which caused significant damage to the Daiichi nuclear power plant.

As a result, the Daiichi plant went critical and was declared a no-go zone by the government due to the nature of radioactive pollution in the area.

However, approximately 10km away on the same coastline is their sister location, the Daini nuclear power plant.

This location also suffered significant damage, but did not go critical.

Their leadership team and site personnel had a Business Continuity plan, tried and tested, in place...

Organizational Resilience...

To our clients, it means partnering together to build resilience in three key areas:

- Information Resilience
- Operational Resilience
- Supply Chain Resilience

Organizational Resilience...

To our clients, it means partnering together to build resilience in three key areas:

- Information Resilience
- Operational Resilience
- Supply Chain Resilience

Poll Question

Which of the following is a priority for your organization in the next 3 to 6 months..?

1. Business Continuity
2. Health & Safety of my workforce
3. Supply Chain Resilience
4. Organizational Resilience

An aerial photograph of a warehouse interior. The left side of the image is obscured by a large, semi-transparent red circle. The visible right side shows a worker in a yellow shirt and cap moving a pallet of cardboard boxes. In the foreground, another worker is seated at a desk with multiple computer monitors, working. A conveyor belt with boxes is visible in the middle ground.

The Importance of Supply Chain Resilience

Supply Chain Resilience...

Definition

As modern day supply chain networks increasingly span continents and become more complex, the ability to quantify and mitigate supply chain risks throughout the procurement, manufacturing, transportation and sales lifecycle is paramount.

Organizations need to identify the critical risks to minimize disruption and help protect global operational, financial and reputational exposures.

Supply Chain Resilience...

Definition

As modern day supply chain networks increasingly span continents and become more complex, **the ability to quantify and mitigate supply chain risks throughout the procurement, manufacturing, transportation and sales lifecycle** is paramount.

Organizations need **to identify the critical risks to minimize disruption and help protect global operational, financial and reputational exposures.**

Supply Chain Resilience...

Today's supply chain challenges include:

Increased demand for transparency from consumers...

Greater demand for goods – ecommerce affect...

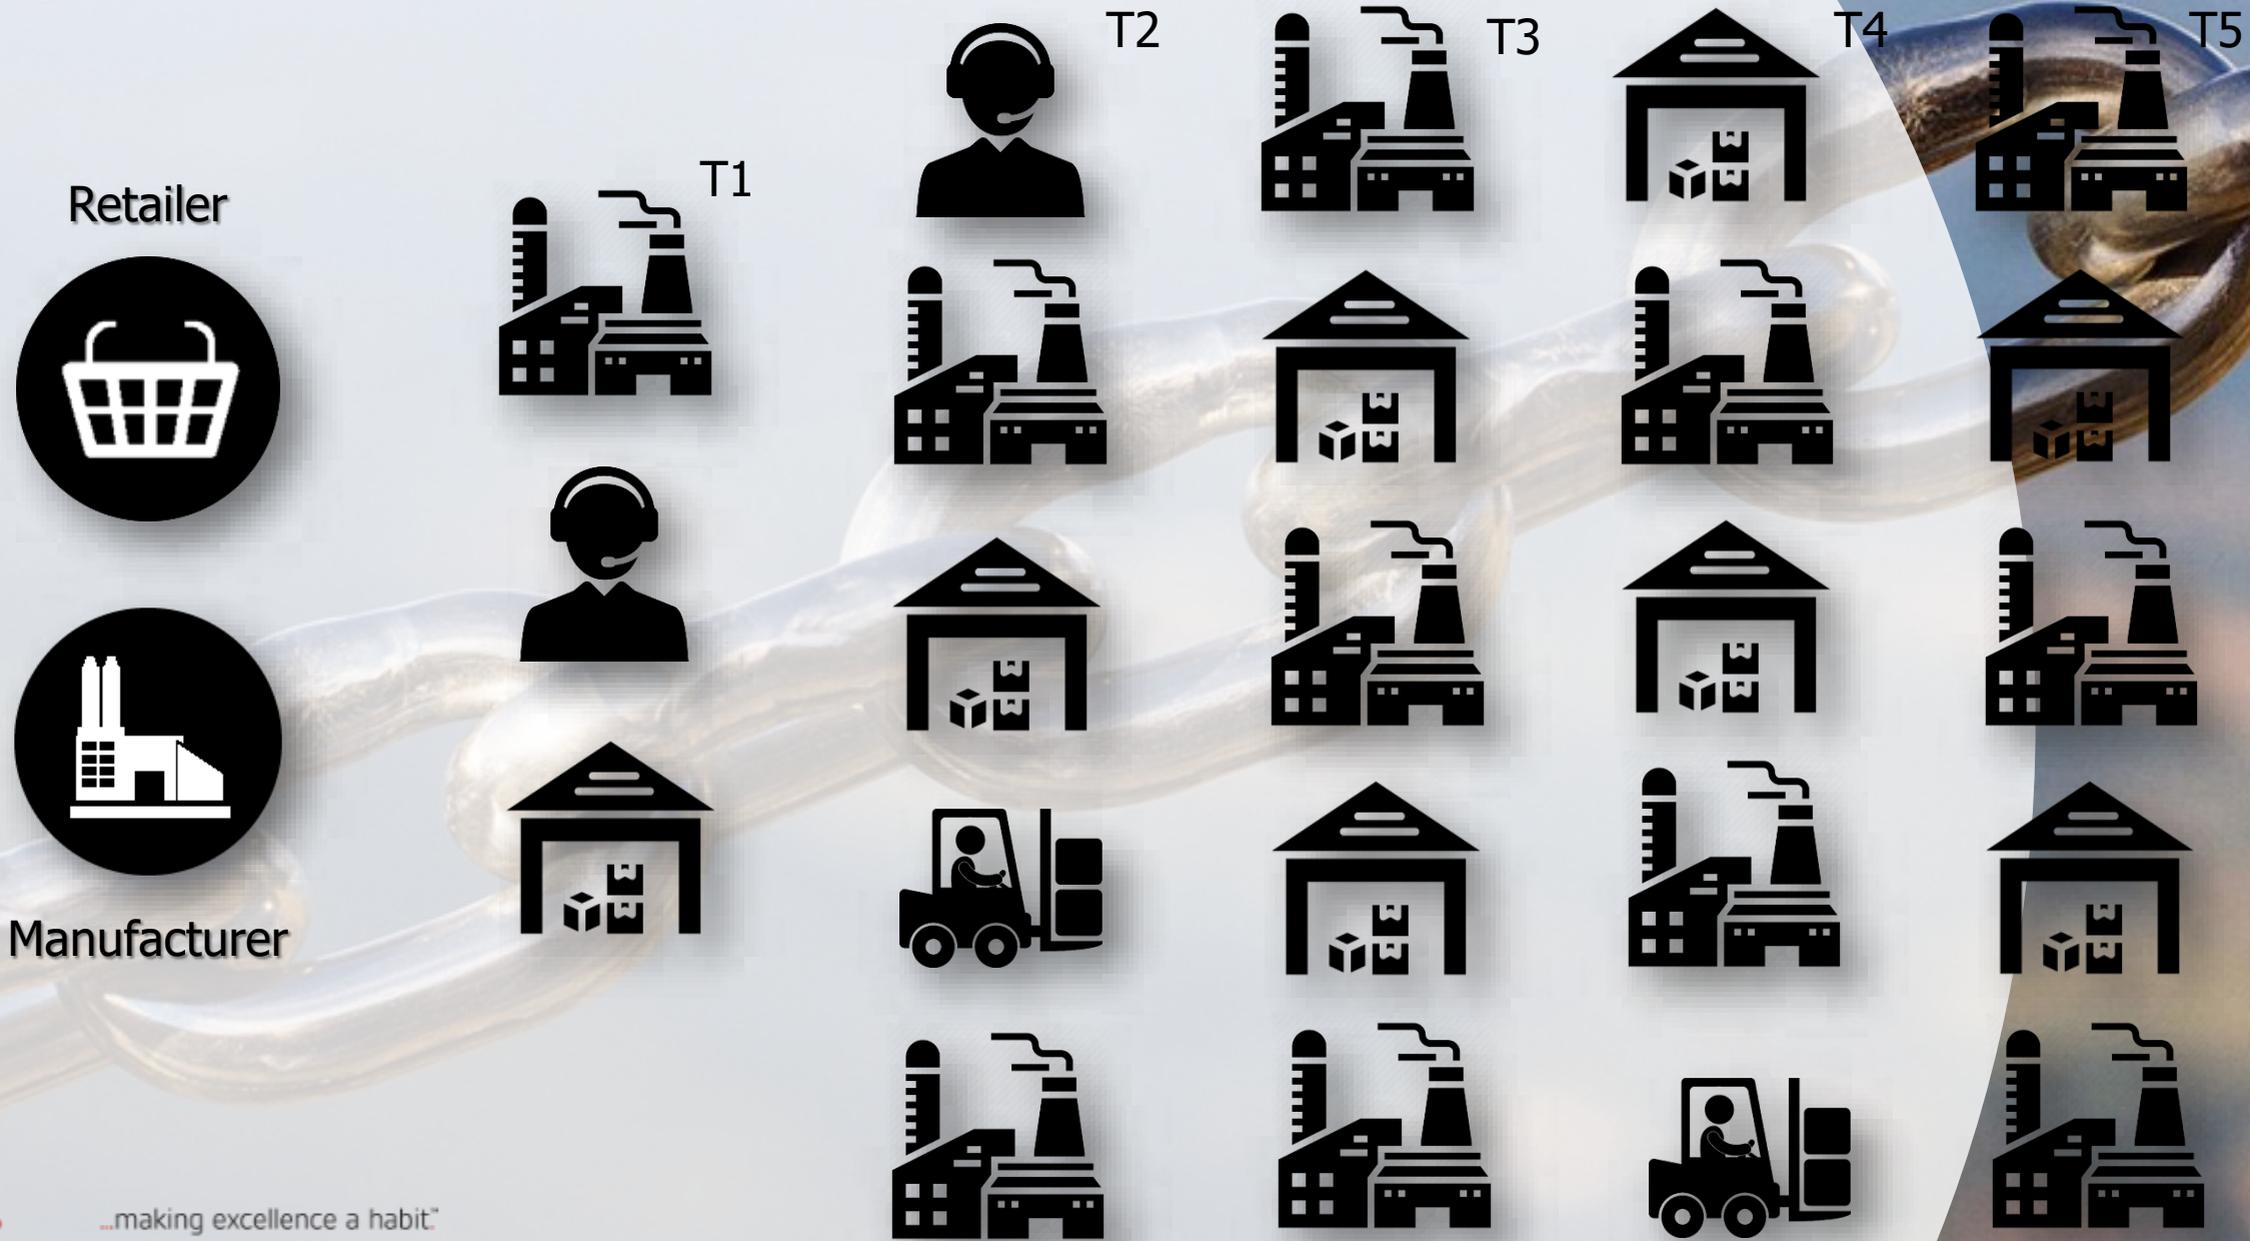

New quality attributes...

- How was it made? and who made it?
- Under what condition was it made?
- What was the impact on the environment?
- Was it sustainably sourced?
- What is the 'customer promise'?

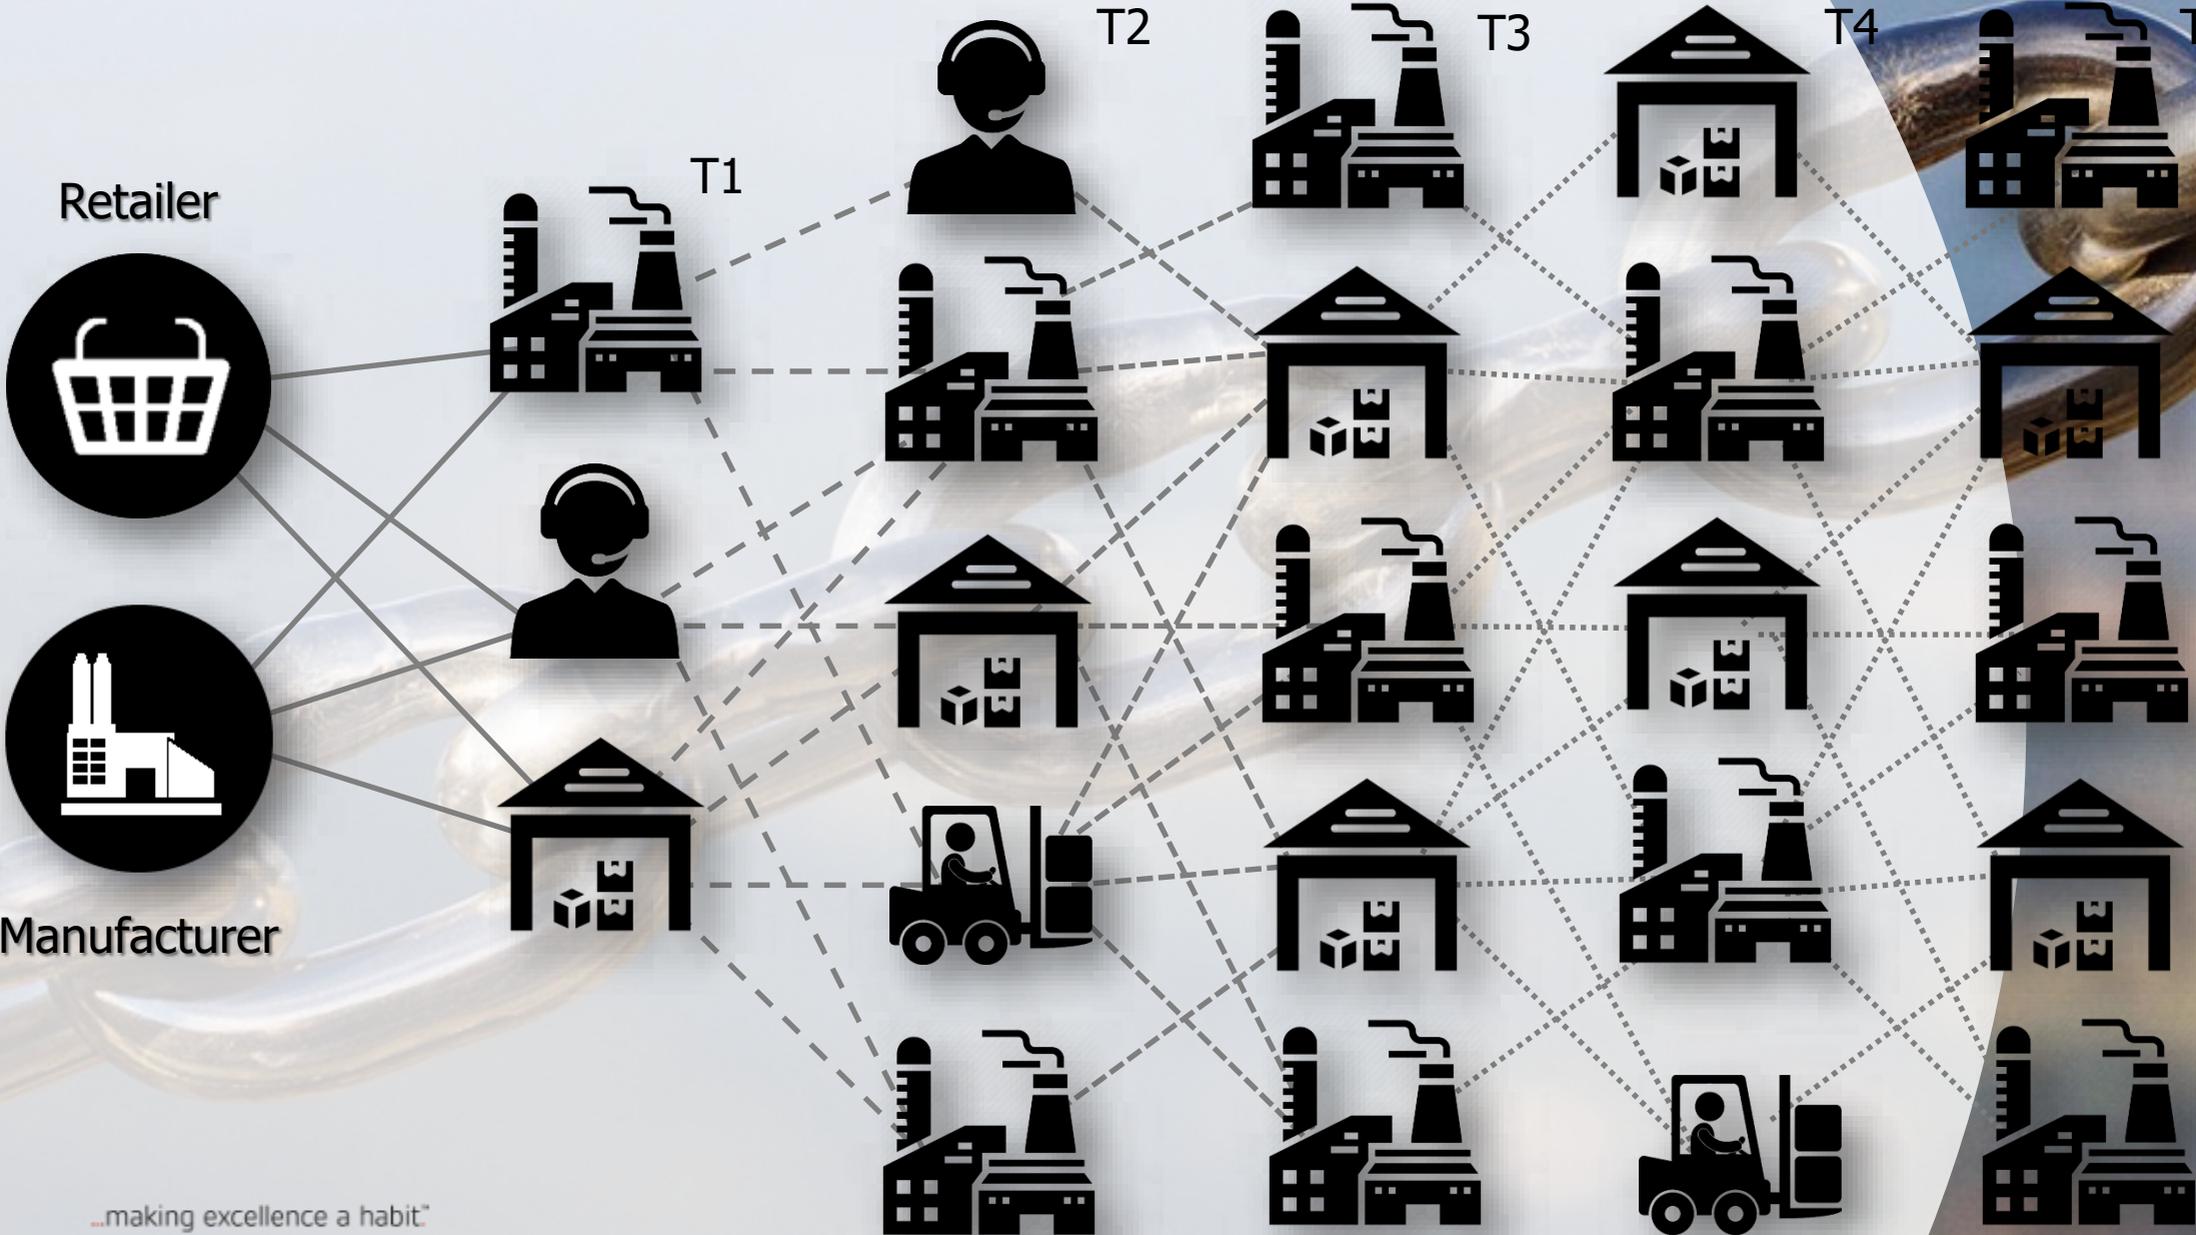

Supply Chain Resilience Test...

- How many suppliers do you currently have?
- How many are direct vs indirect?
- What percentage of your suppliers do you actively verify the living profiles of?
- What percentage of your suppliers are critical to your business?
- Do they operate a safe and responsible business?
- What risks do they present to your business, brand, product and consumer?
- Does your supply chain adhere to your corporate values?
- Can you tell your supply chain story?

Poll Question

Which of the following is most important to your organization..?

1. Identifying a Critical Business Function
2. Identifying a Critical Business Supplier
3. Implementing Business Continuity
4. All of the above

An aerial photograph of a warehouse or distribution center. The scene is partially obscured by a large, semi-transparent red circle on the left side. Inside the red circle, the text 'How to Identify a Critical Business Function' is written in white. The warehouse floor is visible, showing a worker in a yellow shirt and black pants sitting at a desk with a computer. To the right, a conveyor belt is moving several cardboard boxes. In the background, a worker in a yellow hard hat is pushing a pallet jack loaded with boxes. The overall atmosphere is industrial and busy.

How to Identify a Critical Business Function

Critical Business Function

What is a Critical Business Function..?

- A Critical Business Functions or 'CBF' is a business activity or process that must be restored in the event of a disruption to ensure the ability to protect the organization's assets, meet organizational needs, and satisfy regulations.
- Non-Critical Business Functions means, with respect to the business or the services, functions that do not fall within the category of Critical Business Functions.

So how do you identify a Critical Business Function..?

Critical Business Function

For example...

Business Process	Impact Factors	Timeframe Ratings						
		0 – 2 Hours	2 – 8 Hours	Up to 3 Days	Up to 7 Days	Over 7 Days	Over 15 Days	Over 30 Days
Production / Manufacture	Financial / Reputational / Service	0	0	1	2	3	3	3
Packaging / Distribution	Financial / Reputational / Service	0	0	0	1	2	3	3
Finance / Invoicing	Financial / Operational / Shareholder	0	0	0	0	1	2	3
Research & Development	Operational / Financial / Service	0	0	0	0	0	1	2

How to Identify a Critical Business Supplier

How to Identify a Critical Business Supplier...

The majority of industries today are heavily regulated, and one that relies on suppliers for the provision of business critical supply's (e.g. ingredients, materials, packaging components, etc.) and/or services (e.g. testing, warehousing, distribution, etc.) to support core businesses...

What would be the affect to your business if...

- A supplier suddenly went 'offline' (fire, closure, power failure, etc.)
- Is there an alternative supplier who could cover this disruption?
- Are they a direct or indirect supplier?
- How long can you go without their product or service?

How to Identify a Critical Business Supplier...

Critical Supplier Rating – e.g. High / Medium / Low

Continuity Planning – e.g. Alternative Supplier / Back Up Stock

Supplier Visibility – e.g. Direct Supplier / Indirect Supplier

How to Unlock the Unknown Risks in Your Global Supply Chain

A man in a white shirt and tie is standing in a yard filled with stacked orange shipping containers. He is looking down at a tablet device he is holding. The scene is brightly lit, suggesting daytime.

Supply Chain Resilience

Today...

Unplanned incidents and disruptions impact the global supply chain...

Organizations use internal requirements and industry standards to react to these risks and incidents...

Suppliers are required to meet these requirements and standards...

Third party bodies provide independently verified assessments against these requirements...

A man in a white shirt and dark trousers is standing in a yard filled with orange shipping containers. He is looking down at a tablet device he is holding. The background shows several stacks of containers under a clear sky.

Supply Chain Resilience

Tomorrow...

What if there was a way of highlighting the unknown risks throughout a global supply chain, through one single assessment program, covering fifteen critical areas of risk and focus..?

And, by using this information you were able to make more informed decisions on how to manage supplier risks – high risk, low risk, audit frequency, announced, unannounced, etc...

Sounds great...

But how can this be achieved..?

Introducing ISO 22301 Business Continuity Management

Minimize risk and protect your business

Build a robust and resilient organization with ISO 22301

Benefits of ISO 22301*

- 72% helps protect our business
- 73% gives trust in our business

Don't let your business get knocked off course by the unexpected. In today's fast-moving world where supply chains are often complex, and where the threats (from which we need to protect ourselves) range from terrorism to cyber-attacks, or even extreme weather, the need to have a robust and resilient business that can quickly recover from any kind of disaster is vital.

ISO 22301 is the international standard that helps organizations to protect against and recover from disruptive incidents when they happen. It provides a systematic approach to business continuity management, and it's applicable to any organization, regardless of type, size and sector.

Use ISO 22301 to protect your business, your reputation, and minimize financial loss in the case of an incident.

Your ISO 22301 Journey

Whether you're new to business continuity management or looking to improve the right resources and training courses to help you understand and ensure your system keeps on delivering the best for your business.

You need to:

- Buy the standard, understand the content, your requirements and how it will help and protect your business.
- Contact us for a proposal tailored to your organization's needs.

How we help:

- Buy the standard
- Discover how it will help your business
- Attend our training courses

See how ready you are:

- Ensure your organization understands the principles of ISO 22301, the rules individuals in your business will need to play and review your activities and processes against the standard.

Review and get on track:

- Contact us to schedule your certification assessment
- Ensure the right people are available for your audit visits. This is a two-stage process. The length varies depending on the size of your organization.

Why BSI?

BSI has been at the forefront of ISO 22301 since the original Business Continuity Standard, BS 25999-2, was pioneered by us in 2007. And we continue to be at the forefront of developing and evolving standards to keep organizations resilient and robust. That's why we're best placed to help you understand the standard.

At BSI, we create excellence by driving the success of our clients through standards. We help organizations incorporate resilience, grow sustainably, adapt to change and prosper for the long term. We make excellence a habit.

For over a century, our experts have been challenging mediocrity and complacency to help embed excellence into the way people and products work. With 80,000 clients in 182 countries, BSI is an organization whose standards inspire excellence across the globe.

*Based on BSI benefits survey (2015) and research which benefits from ISO 22301. Source: International Standards Organization (ISO), Business Continuity Institute (BSI).

Our products and services

We provide a unique combination of complementary products and services, managed through our three business streams: Knowledge, Assurance and Compliance.

Knowledge

The core of our business centers on the knowledge that we create and impart to our clients. In the standards arena, we continue to build our reputation as a thought leader, bringing together experts from industry to shape standards at local, regional and international levels. In fact, BSI originally created eight of the world's top 10 management system standards.

Assurance

Independent assessment of the conformity of a process or product to a particular standard ensures that our clients perform to a high level of excellence. We train our clients in world-class implementation and auditing techniques to ensure they maximize the benefits of standards.

Compliance

To experience real long-term benefits, our clients need to ensure ongoing compliance to a regulation, market need or standard so that it becomes an embedded habit.

Further Information... Self-Assess

ISO 22301

Self-assessment questionnaire

How ready are you?

This document has been designed to help you determine your company's readiness for Continuity Management System certification assessment. By completing this questionnaire, you will be able to identify where you are in the process in relation to the main requirements of the standard.

Context of the organization

Has your organization determined the external and internal issues that are relevant to your organization's purpose that affect its ability to achieve the intended results of your Business Continuity Management System (BCMS)?

Do you have a way of reviewing and monitoring changes to these issues on a regular basis?

Have you determined the needs and expectations of interested parties that are relevant to the BCMS? Do you review these on a regular basis?

Have you determined the scope of your BCMS, and did this take into account the external and internal issues, interested parties and any activities performed by other organizations?

Are you aware of the requirements of interested parties, including regulatory, statutory and those of your customers?

Have the risks and opportunities associated with these issues and requirements been considered?

Planning

Is there a formal process for determining the need for a BCMS and opportunities that need to be addressed to ensure the BCMS can achieve its intended results? Has the organization planned actions to address these risks and opportunities and integrated them into the system processes?

Support

Has the organization determined and provided the resources needed for the establishment, implementation, maintenance and continual improvement of the BCMS, including people, infrastructure and environment for the operation of processes?

Are these processes consistent with the personnel in the defined BCMS roles?

Has the organization determined the knowledge necessary for those performing BCMS roles?

Has the organization ensured that those persons who perform the performance and effectiveness of the BCMS are competent on the basis of appropriate education, training or experience, or a combination thereof, to ensure that those persons can gain the necessary competence?

Has the documented information required by the standard and necessary for the effective implementation and operation of the BCMS been established?

Is the documented information controlled in a way that it is available and adequately protected, distributed, stored, reviewed and/or change controlled, including documents of external origin required by the organization, for the BCMS?

Operation

Have you revised and implemented a program to ensure the BCMS achieves its objectives?

Is there a plan for the determining the need for changes to the BCMS and managing their implementation?

When changes are planned, are they carried out in a controlled way and actions taken to mitigate any adverse effects?

If you have outsourced processes, are they adequately controlled?

Is there a formal and documented process for understanding the organization through a Business Impact Analysis (BIA)?

Further Information... Implement

ISO 22301 Business Continuity

Your implementation guide

How ISO 22301 works

ISO 22301 is the international standard that helps you to protect your business and your people from unexpected disruptions. Whether your business is in the unexpected is the key to the survival of any business. If a management system is in place, such as ISO 22301, you can ensure organizational resilience.

Benefits of ISO 22301*

- 72% helps protect our business
- 73% gives trust in our business

How ISO 22301 works

ISO 22301 is based on the high level structure of management system standards. This helps you offer matching sub-clauses against the top-level structure and apply common language across all standards. It makes it easier for organizations to incorporate their Business Continuity Management System (BCMS) into core business processes, make efficiencies and have more engagement from senior management. Plan-Do-Check-Act (PDCA) is the operating principle of ISO 22301. It's applied to all processes and the BCMS as a whole for continuous improvement. This diagram shows how Clauses 4 to 10 of ISO 22301 can be grouped in relation to PDCA.

Some of the core concepts of ISO 22301

Concept	Comment
Context of the organization	The various factors that influence the organization
Interested parties	A person or organization that can affect or be affected by the organization's performance
Leadership	Requires a single person or group of people to provide leadership and ensure the organization's objectives are met
Performance evaluation	The various methods for measuring and monitoring the organization's performance
Maximum Acceptable Disruption (MAD)	The time it takes for the organization to recover from a disruption
Minimum Business Continuity Objective (MBCO)	The minimum level of performance that the organization must maintain during a disruption
Priority of activities	Order and timing of activities during a disruption
Working and communication	Activities during a disruption

Key requirements of ISO 22301

Clause 1: Scope
The first clause details the scope of the standard.

Clause 2: Normative references
This clause provides the normative references contained in the standard.

Clause 3: Terms and definitions
Please refer to the terms and definitions contained in ISO 22301. This is an important document to read.

Clause 4: Context of the organization
This clause is a good starting point to approach the standard as you need to decide on the context of your BCMS and how your organization's strategy supports it. This means that you need to identify how your organization sits within its environment. You will need to identify external and internal issues that are relevant to the purpose of the BCMS and how they relate to its expected outcomes. Then you'll need to identify your relevant internal and external interested parties (or stakeholders) who are relevant to the BCMS. You'll also need to decide what is covered by business continuity and just as importantly what isn't. This means that you will need to consider your activities for risk and what the relevant legal and regulatory requirements are for your organization.

Top tips on making ISO 22301 effective for you

Every year we help tens of thousands of clients. Here are their top tips.

- Top management commitment is key to making this a success.**
"The earlier that organizations talk to senior managers, the better it will go for them so have those discussions early."
John Scott, Overtunity, leading UK fit-out and refurbishment business.
- Keep staff informed of what's going on, create a team or assign a champion, as this will increase motivation. This could include a well communicated plan of activities and timescales.**
"When we decided to implement the new standard, we assigned an internal champion of the standard inside the organization."
Ronald Van Roooy, Holo, long based cloud services provider.
- Think about how different departments work together to avoid silos. Make sure the organization works as a team for the benefit of your customers and your business.**
"With ISO 22301 in place, we are all talking the same language about the business. We all understand what is meant by best practices and we are better able to deliver on our customers' expectations, even during an impactful business event."
Dan Nichol, Citra, US based network solutions provider.
- Review systems, policies, procedures and processes you have in place – you may already do much of what's in the standard, and make it work for your business.**
"The BCM system is a great reassurance. It has enabled us to make plans to mitigate problems quickly if they occur – for example, to identify a second water supply and provide electricity back-up – things we wouldn't have done otherwise."
Andy Drummond, Lertepal Plastics Ltd, UK engineering company.
- Speak to your customers and suppliers. They may be able to suggest improvements and give feedback on your service.**
"They [customers] know we have a solid framework for service continuity and ability to restore all services to business-as-usual operation in the best possible time."
Sergey Verina, Dux 6 Bradtree (Australia), global business information provider.
- Train your staff to carry out internal audits of the system. This can help with their understanding, but it could also provide valuable feedback on potential problems or opportunities for improvement.**
"Staff awareness training was vital to the success of ISO 22301 implementation project."
Joe O'Connell, AICO Insurance, Nigerian life insurance provider.

And finally, when you gain certification, celebrate your achievement, and use the **BSI Assurance Mark** on your literature, website and promotional material.
