

Digital Trust | ISO/IEC 27001:2022 Lead Auditor Transition

International training

Number of days

2

Key information about the course

Many organizations have a need to control information and information systems.

ISO/IEC 27001:2022 provides requirements that can be used to manage their information security risks. The standard was revised and there are changes to the requirements that need to be applied to existing information security management systems.

This course provides a review of the updated standard from ISO/IEC 27001:2013, what the key differences are, and how an organization may implement and audit these changes.
